

**The lesson makes sense.
The next question doesn't.**

Dunlo turns discovery into practice

A short-form learning feed with a clear path into Khan Academy.

Easy to start

Young learners can start with one idea in a familiar, scrollable feed.

Try an interactive model or Khan clip.
Make a prediction and see why.

Clear to continue

Each idea points to a matching Khan Academy exercise.

Return to Dunlo for a fresh question.
Save the idea to revisit later.

The familiar feed opens the door. Connected practice gives that curiosity somewhere to go.

How one discovery becomes a learning session

One topic stays connected across the feed, Khan practice and later review.
Learning design: IES practice guide (2007).

Short-form content. Active learning.

For learners used to mobile feeds,
Dunlo makes one idea easy to start.

Scroll. Try. Keep going.

Move a slider or watch a focused Khan clip.
Make a prediction and get an explanation.

Follow the idea into a matching Khan exercise.
Save it for a fresh question later.

Explore the working feed · dunlo.vercel.app/explore

Make the relationship visible

Example: move the four areas to see why the middle terms combine.

The pieces keep their meaning.

	x	4	
x	x^2	$4x$	$3x + 4x = 7x$
3	$3x$	12	

Separate the four pieces

FOUR AREAS

$$x^2 + 3x + 4x + 12$$

Each part keeps its meaning.

COMBINE

$$3x + 4x = 7x$$

The middle terms belong together.

RESULT

$$x^2 + 7x + 12$$

Then try a different question.

Khan Academy, right in the feed

FACTORING · 1 MIN 34 SEC

One focused clip.
A clear next step.

The original Khan video plays in the feed.
Learners can open the full lesson,
then practise the same skill on Khan.

Useful help when a step is difficult

1

2

3

A short question
finds the missing
step

A worked example
explains that step

A new question
checks independent
use

Learners can choose “learn first” or check what they already know.

Worked examples guide the attempt; a different question checks what the learner can do next.

See the recovery example

Try the complete journey

Explore an idea, open Khan practice,
and return for a fresh question.

Try Dunlo

dunlo.vercel.app

Explore freely, or bring your current learning goal.

Scan to explore

Khan learning has a clear continuation

The same idea connects discovery, practice and review.

Your place is saved when you open Khan practice.

Khan sources are labelled. Completion reports and fresh answers stay separate.

A useful reason to return

Today

Save a discovery.
Use it on a fresh question.

Later

Revisit the idea.
Try it in another situation.

Saved ideas and later questions turn a quick visit into a path back.

Start with public access

PUBLIC LAUNCH

NO DUNLO ACCOUNT NEEDED

Open an idea

Share an idea

Public topic links will let learners
open an idea without a Dunlo account.

Save and share a specific challenge
to give someone a useful starting point.

Launch with short demo posts

Link each post to the matching idea

Start online through public sharing; future school or community use can extend this model.

A practical launch and growth plan

NOV 2026
Review content
and launch publicly

DEC 2026–FEB 2027
Gather feedback
and refine the flow

MAR 2027
Evaluate use
and plan continuation

Expand through reviewed learning sequences

Each new topic will include an interactive or clip, a matching Khan activity, worked support and fresh questions.

Track which ideas learners open, where they stop and how fresh answers change.

Next extensions: more subjects, reviewed Filipino content and original offline mini-packs.

Free learning. A plan for continuity.

PHP 100,000

Turn curiosity into progress.

Dunlo uses short-form discovery to bring learners into Khan practice, then helps them apply the idea and return to it.
