

Khanpanion: 15–page submission deck

This deck is designed to be read independently for top-30 selection, without a spoken pitch. The same Canva design remains the editable source. Page 1 presents only the problem; page 14 closes the story and page 15 provides learning research.

Slide 1: 79% below basic math proficiency

- 79%
- of Filipino 15-year-old students scored below basic proficiency in mathematics.
- Source: OECD, PISA 2025 Philippines country note (2026). The OECD reports 21% at or above Level 2; the complement is 79% below that threshold.

Slide 2: Khanpanion turns discovery into practice

- Khanpanion turns discovery into practice
- A short-form learning feed with a clear path into Khan Academy.
- Easy to start
- Young learners can start with one idea / in a familiar, scrollable feed.
- Try an interactive model or Khan clip. / Make a prediction and see why.
- The familiar feed opens the door. Connected practice gives that curiosity somewhere to go.
- Clear to continue
- Each idea points to a matching / Khan Academy exercise.
- Return to Khanpanion for a fresh question. / Save the idea to revisit later.

Slide 3: How one discovery becomes a learning session

- How one discovery becomes a learning session
- Choose one / short idea
- Predict, then / see why
- Practise with / Khan Academy
- Answer a fresh / question in Khanpanion
- One topic stays connected across the feed, Khan practice and later review. / Learning design: IES practice guide (2007).

Slide 4: Short-form content. Active learning.

- Short-form content. Active learning.
- For learners used to mobile feeds, / Khanpanion makes one idea easy to start.
- Scroll. Try. Keep going.
- Move a slider or watch a focused Khan clip. / Make a prediction and get an explanation.
- Follow the idea into a matching Khan exercise. / Save it for a fresh question later.
- Explore the working feed · dunlo.vercel.app/explore

Slide 5: Make the relationship visible

- Make the relationship visible
- FOUR AREAS
- $x^2 + 3x + 4x + 12$
- Each part keeps its meaning.
- COMBINE
- $3x + 4x = 7x$
- The middle terms belong together.
- RESULT
- $x^2 + 7x + 12$
- Then try a different question.
- Original Khanpanion interactive · Learning design: Chi & Wylie (2014), ICAP framework
- Example: move the four areas to see why the middle terms combine.

Slide 6: Khan Academy, right in the feed

- Khan Academy, right in the feed
- FACTORING · 1 MIN 34 SEC
- One focused clip. / A clear next step.
- The original Khan video plays in the feed. / Learners can open the full lesson, / then practise the same skill on Khan.
- Source: Khan Academy · Factoring quadratics · 2:22-3:56

Slide 7: Useful help when a step is difficult

- Useful help when a step is difficult
- A short question / finds the missing step
- A worked example / explains that step
- A new question / checks independent use
- Learners can choose “learn first” or check what they already know.
- Worked examples guide the attempt; a different question checks what the learner can do next.
- See the recovery example

Slide 8: Try the complete journey

- Try the complete journey
- Explore an idea, open Khan practice, / and return for a fresh question.
- Try Khanpanion
- dunlo.vercel.app
- Scan to explore
- Explore freely, or bring your current learning goal.

Slide 9: Khan learning has a clear continuation

- Khan learning has a clear continuation
- The same idea connects discovery, practice and review.
- IDEA
- Discover or bring / a learning goal
- LEARN
- Open a Khan clip / or explanation
- KHAN
- Practise the / relevant exercise
- TRY
- Return to a fresh / independent question
- REVISIT
- Keep the idea for / a later session
- Your place is saved when you open Khan practice.
- Khan sources are labelled. Completion reports and fresh answers stay separate.

Slide 10: A useful reason to return

- A useful reason to return
- Today
- Save a discovery. / Use it on a fresh question.
- Later
- Revisit the idea. / Try it in another situation.
- Saved ideas and later questions turn a quick visit into a path back.
- Learning design: recalling an idea and spacing practice · Carpenter, Pan & Butler (2022)

Slide 11: Start with public access

- Start with public access
- PUBLIC LAUNCH
- NO KHANPANION ACCOUNT NEEDED
- Open an idea
- Share an idea
- Public topic links will let learners / open an idea without a Khanpanion account.
- Save and share a specific challenge / to give someone a useful starting point.
- Launch with short demo posts
- Link each post to the matching idea
- Start online through public sharing; future school or community use can extend this model.

Slide 12: A practical launch and growth plan

- A practical launch and growth plan
- NOV 2026 / Review content / and launch publicly
- DEC 2026-FEB 2027 / Gather feedback / and refine the flow
- MAR 2027 / Evaluate use / and plan continuation
- Expand through reviewed learning sequences
- Each new topic will include an interactive or clip, a matching Khan activity, / worked support and fresh questions.
- Track which ideas learners open, where they stop and how fresh answers change.
- Next extensions: more subjects, reviewed Filipino content and original offline mini-packs.

Slide 13: Free learning. A plan for continuity.

- Free learning. A plan for continuity.
- PHP 100,000
- 60%
- Content review, / access and evaluation
- Seek support for free delivery and maintenance.
- Allocation
- PHP
- Content review
- 30,000
- Access & usability
- 18,000
- Evaluation
- 12,000
- Operations & hosting
- 12,000
- Interactive production
- 12,000
- Localization review
- 8,000
- Launch materials
- 3,000
- Contingency
- 5,000
- Total
- 100,000
- Implementation budget · Planning allocations; funding not secured

Slide 14: Turn curiosity into progress.

- Turn curiosity into progress.
- Khanpanion uses short-form discovery to bring learners into Khan practice, / then helps them apply the idea and return to it.
- Explore Khanpanion · dunlo.vercel.app
- Matthew Labrador · Paul Recio · Harry Gomez / Coach: Justin Mesias · University of the Philippines Manila

Slide 15: Research behind the learning design

- Research behind the learning design
- Khanpanionsky et al. (2013) / Improving students' learning with effective / learning techniques. PSPI, 14(1).
- Carpenter, Pan & Butler (2022) / The science of effective learning with spacing / and retrieval practice. Nature Reviews Psychology.
- Tversky, Morrison & Bétrancourt (2002) / Animation: can it facilitate? / International Journal of / Human-Computer Studies, 57(4).
- Atkinson, Renkl & Merrill (2003) / Transitioning from studying examples / to solving problems. / Journal of Educational Psychology, 95(4).
- Chi & Wylie (2014) / The ICAP framework: linking cognitive / engagement to active learning outcomes. / Educational Psychologist, 49(4).
- Yang et al. (2021) / Testing (quizzing) boosts classroom learning: / a systematic and meta-analytic review. / Psychological Bulletin, 147(4).
- Szpunar, Khan & Schacter (2013) · Interpolated memory tests reduce mind wandering / and improve learning of online lectures. PNAS, 110(16).

Export checks

Exactly 15 pages with descriptive PDF bookmarks. Preserve the UP Manila seal and university name on every page, with the Health Sciences Center tagline removed as requested. The native iPhone mockup uses a fresh app capture with status-area spacing; the camera cutout clears the controls and the navigation sits within the rounded display. QR pixels, QR image link, Try Khanpanion button and printed URL open <https://dunlo.vercel.app/>. The specific recovery example remains on slide 7. Learning references link to original records or publications. Future launch and growth work is described in future tense. The budget totals PHP 100,000.
