

Khanpanion: final entry review

The current story connects interactive discovery to continued Khan learning. The demonstration should make three things immediately clear: the learner can act on an idea, Khan provides the next learning or practice activity, and Khanpanion preserves a useful continuation.

The PDF must carry that mechanism without relying on live playback. Use real product images, readable labels and a concise example. Keep the official UP Manila mark on all 15 pages and leave the demo button, QR pixels, QR image link and fallback URL pointing to the same destination.

The implementation story starts with public access. Avoid presenting a recruited school cohort, secured partners, verified usage or learning gains. Future work is described once in the implementation/evaluation sections rather than repeated throughout the product story.

Final engineering and export evidence is recorded in docs/DISCOVERY_RELEASE_2026_09_13.md after verification. Test counts do not establish learning gains or a competition rank.
